Note: While some panels may work with older Spectrum "legacy" products, Spectrum only recommends using these panels with the specific compatible products listed above.

## Construction

- Overbridge panels are constructed from 3/4" thick NAF (no added formaldehyde) composite board with .030" [.762mm] high-pressure textured laminate (standard black) on one face, and a balancing phenolic backer on the opposing face
- Connector bracket is 16-gauge steel finished with a scratch-resistant powder coat epoxy

Note: Overbridge panels with standard cutouts have been designed for many of the currently available devices on the market. Custom cutouts are available, but should be reviewed by Spectrum to ensure clearance of brackets, keyboard slides, or other objects under the worksurface.

### Contact Spectrum to specify cutout size(s) and location(s).

Cutouts can be made in the blank insert panel by the customer after the lectern has been purchased, but are only recommended within the maximum cutout areas shown.

## 2-piece "split" panels

2-piece panels are used when:

- one or more cutouts are needed
- frequent device changes or upgrades are anticipated

Note: Symmetrical panels are easily removable with two screws and can be rotated 180° to place cutouts on left or right-side.
